

ActivAir Walking Boot

DCT-6061 The ActivAir Boot is an incredibly lightweight lower extremity orthosis that provides optimal stability, support, and ankle immobilization after injury or surgery. The ActivAir Boot features a patient-friendly streamlined design, pneumatic pump, shock sole, and rocker's bottom, catering to patient comfort and protection.

Shock Sole

The ActivAir Walking Boot incorporates a shock sole which provides advanced shock-absorbing technology to reduce impact and enhance comfort during movement.

Highlights

- Customizable Sizes: Mens 2-12.5+ and Women's 3.5-13.5+
- Provides a lightweight construction
- Rocker's Bottom Design: Facilitates a natural gait and reduces strain on the foot and ankle, promoting smoother mobility

Indications

- Grade 2 and 3 ankle sprains
- Stable fractures of the foot and ankle
- Stress fractures of the lower leg
- Bunionectomies
- Metatarsal fractures
- Forefoot, midfoot, and hindfoot injuries

Superior Post-Injury Support

ActivAir is a post-injury support boot that provides robust support and immobilization to aid in the recovery process post-injury or post-surgery

PDAC Approved: L4630/L4631
