

Universal Wrist and Thumb

DCT-200 The Universal Wrist and Thumb orthosis restricts movement, immobilizing, and protecting the wrist and thumb from additional stress and injury. Its low-profile design, combined with a lightweight material composition, enhances patient compliance and wearability by offering a comfortable and unobtrusive fit.

Effective Immobilization

Provides exceptional immobilization with its anatomically contoured design, ensuring secure support and minimizing movement to protect the wrist and thumb from additional stress or injury.

PDAC Approved: L3807/3809
