

Wrist Extension

DCT-908 The Wrist Extension limits wrist motion to prevent additional stress and injury, offering protection for soft tissue injuries, mild to moderate strains, sprains, and post-cast healing. Its low-profile design and lightweight material enhance patient compliance and comfort, making it ideal for extended wear.

Optimal Motion Restriction

Restricts wrist and thumb movements to stabilize the area, prevent further injury, and support effective healing.

PDAC Approved: L3908

Highlights

- Protects wrist and thumb from additional stress and injury
- Shields these areas from undue strain and potential damage during recovery or daily activities
- Low-profile design: offers a discreet fit that minimizes bulk
- Lightweight and low profile
- Enhanced comfort and ease of use

Indications

- Mild to moderate strains and sprains
- Soft tissue injuries
- Ligament instability
- Gamekeeper's thumb
- De quervain syndrome symptoms

Adjustable Sizing Mechanism

Allows for precise adjustments to ensure a secure and individualized fit.
